ABSTRACT

This collection of statistics provides information on dropout rates in Arizona public schools. A dropout was defined as a student who was enrolled at the end of the 1991-92 school year or at any time during the 1992-93 school year, who was not enrolled at the end of the school year and whose absence could not be explained by transfer, graduation, or death. There were 3,529 dropouts from grades 7 and 8 combined, or 3.2 percent of the total enrollment. Only 11 percent deliberately left school or were expelled, but 86 percent were students whose status was unknown. Many may have been enrolled in other schools. There were 24,348 dropouts from high school, representing 12.4 percent of the total high school enrollment. More than half of these were students whose status was unknown. While the number of dropouts was highest at grade 9, the dropout rate was highest at twelfth grade and ungraded high school levels. Rates varied for ethnic groups but were lowest for Asian Americans and highest for American Indians. Males were somewhat more likely to drop out than females. Statewide, dropout rates were higher for 1992-93 than for 1991-92 by 1.5 percentage points. Thirteen tables and 7 charts illustrate the analysis. Six appendixes present reports in table form for 497 schools and 29 special programs in 29 districts. (SLD)

I. EXECUTIVE SUMMARY

The collection of dropout statistics represents the cooperative efforts of local school districts, the Arizona Department of Education (ADE), the state Legislature, and the United States Department of Education (USDOE) to respond to the need for more accurate, comparable, and timely dropout information. The present emphasis on education reform demands greater attention to performance indicators; dropout rates, in particular, are frequently regarded as a key indicator of the success or failure of a public school system. School completion has been set as a national and state goal.

For purposes of this study, a dropout was defined as

> **A student who was enrolled at the end of the prior school year (1991-92) or at any time during the school year (1992-93), who was not enrolled at the end of the school year, and whose absence cannot be explained by transfer to another school district, graduation, or death.**

Dropouts were counted on a twelve-month basis, from the end of the 1991-92 school year to the end of the 1992-93 school year. Those students who were enrolled at the end of 1991-92 and were expected to return to school in the fall of 1992, but did not, were counted as summer dropouts from the grade for which they were expected to enroll.

There were 3,529 dropouts from the elementary grades (seven and eight combined), or 3.2% of the total enrollment. Only 11% of those dropouts deliberately left school or were expelled. Another 3% left because of a physical illness that could not be accommodated by a homebound instruction program. An overwhelming majority, 86% of the elementary school dropouts, were students whose status was unknown. It is generally believed that most of these students have moved and re-enrolled in another school, without notifying the schools they left. Continued efforts to locate missing elementary students should result in a continued reduction of the dropout rate.

There were 24,348 dropouts from high school grades, or 12.4% of the total high school enrollment. More than half (60%) of these dropouts were students whose status was unknown. Only 1% of high school dropouts left school because of illness, 3% were expelled, and the remaining 36% of the dropouts have chosen to leave school.

The **number** of dropouts was highest at the ninth grade level, but the dropout **rates** (proportion of total enrollment) were highest at the twelfth grade and ungraded high school levels. There was a large increase in the dropout rate between eighth (3.2%) and ninth (12.0%) grades, indicating that the transition from elementary to high school is a difficult period in students' lives. Schools that teach ninth grade classes at the junior high school building manifested a less

pronounced increase in the dropout rates between eighth and ninth grades.

Dropout rates varied significantly among the ethnic groups. The mean rates were lowest for Asian students (5.5%) and highest for American Indian students (13.3%), but patterns of dropping out varied by grade level. In the elementary grades, Hispanic and American Indian rates were approximately the same at 5.3%, about twice as high as the White or Asian dropout rates. In the ninth and tenth grades, American Indian rates were the highest, but in the eleventh and twelfth grades, the rates were higher for both Black and Hispanic students than for American Indians.

Dropout rates were higher for males than for females, but there was little difference on the elementary level and a more than two percentage points difference between male and female dropout rates on the high school level.

Students were increasingly more likely to drop out during the school year than during the summer as they progressed through high school, at least until eleventh grade. American Indian students were the most likely, and Asian students the least likely, to drop out during the school year.

In every grade, the mean dropout rates were noticeably lower for unified districts (which teach all grade levels) than for their counterparts, the elementary and union high school districts. In general, the unified districts represented 63% of the enrollment but only 52% of the dropouts in this study. In general, larger districts had higher dropout rates. However, in the eight largest districts, the high school dropout rates ranged from 4.2% to 22.9%.

Compared to the 1991-92 reports, the dropout counts and rates were lower this year for **elementary** students (from 3.3% in 1991-92 to 3.2% in 1992-93) [1]. Seventy districts had lower dropout rates, 59 districts' dropout rates remained the same (within 0.1%), and 59 districts had higher dropout rates than in 1991-92. Sixty districts had no dropouts this year on the elementary level.

Statewide, the **high school** dropout rates for 1992-93 (12.4%) were higher than 1991-92 (10.9%) by 1.5 percentage points. Higher rates were not universal, however. High school dropout rates decreased or remained constant for 52 districts for 1992-93 and rates were higher in 52 districts. The state's average dropout rate rose because the districts whose rates were up had a median increase of 2.5 percentage points and districts whose rates were down had a median decrease of 1.9 percentage points. Sixty-three of 104 districts with high school grades have had dropout rates lower than the state average for both years.

---

[1] Throughout this report, the 1991-92 dropout counts and rates are shown for a comparable twelve month period of time, from the end of the 1990-91 school year to the end of the 1991-92 school year. Appendix E contains a complete discussion of the changes in reporting methodology.

Across all grade levels, the dropout rates rose 0.9 percentage points, from 8.1% to 9.0%. Rates for Asian students were lower than in 1991-92 and there were fewer American Indian students who dropped out, although the rate was slightly higher. From 1991-92 to 1992-93, the rates increased more for males (from 8.6% to 9.8%) than for females (7.6% to 8.3%).

It is likely that the increase in dropout rates can be attributed, in part, to a change in the reporting methodology. Prior to the 1992-93 report, a person at the school or district compiled their dropout data from a number of sources and filled in dropout study report forms, which were submitted to the ADE. For many schools, the data collection was time consuming and cumbersome. To reduce the districts' reporting burden and improve data reliability, the ADE began collecting the dropout data from the Year End Enrollment report. If the 1991-92 dropout reports were prepared correctly, the dropout rates should not have been affected by the change in data source, because the definitions, data elements, and the calculation remained constant. Changes in the dropout rate **should** have reflected an actual change in the dropout condition of the district. But a review of the changes in districts' rates from one year to the next showed that 18 districts' high school dropout rates increased and 11 districts' rates decreased by more than four percentage points. In most of those cases, it was surmised that reporting errors (rather than an extreme change in the dropout condition of the district) were responsible. In general, the 1992-93 data should be more reliable than the data collected on dropout report forms. The reader should look at both years' dropout counts and rates for the districts of interest to determine whether the change seems reasonable.

II. INTRODUCTION AND DEFINITIONS

The collection of dropout statistics represents the cooperative efforts of local school districts, the Arizona Department of Education, the state Legislature, and the United States Department of Education to respond to the need for more accurate, comparable, and timely dropout information. The present emphasis on education reform demands greater attention to performance indicators; dropout rates, in particular, are frequently regarded as a key indicator of the success or failure of a public school system. School completion has been set as a national and state goal.

Who Must File

In 1987, the Arizona state Legislature mandated an annual dropout rate study to measure the success of dropout prevention efforts. All Arizona public school districts teaching any of the grades seven through twelve are required to submit dropout data annually.

Reporting Period

The dropout rate study measures the proportion of students who drop out of school during a twelve-month period, from the end of the 1991-92 school year until the end of the 1992-93 school year. This reporting period is different from prior years in one important aspect. In the first three years of the dropout rate study, dropouts who returned to school during a "grace period" (the first month of the succeeding school year) were not counted. This year, to provide a more accurate annual dropout count, the reporting period ended at the end of the 1992-93 school year, without adjustments for any dropouts who returned in September 1993. In this report, the 1991-92 dropout counts and rates are shown for a comparable twelve-month period of time, from the end of the 1990-91 school year to the end of the 1991-92 school year. Appendix E discusses the changes in reporting methodology over the past four years.

Definition of a Dropout

For purposes of this study, a dropout was defined as **a student who was enrolled at the end of the prior school year (1991-92) or at any time during the school year (1992-93), who was not enrolled at the end of the school year, and whose absence cannot be explained by transfer to another school district, graduation, or death.**

A summer dropout, then, was a student who was in school at the end of 1991-92, had not enrolled by the end of the school year 1992-93, and there was no evidence of transfer to another

district, graduation, or death. Summer dropouts were reported in the grade for which they failed to appear. A school year dropout was enrolled at some time during the 1992-93 year, was not present at the end of the school year, had not graduated or died, and there was no evidence of transfer to another school district.

The following statements demonstrate how the dropout definition was applied to determine a student's status.

- **Transfer to another educational program** - In general, a student is not a dropout if there is documented evidence of transfer to another elementary or secondary school.
  - Students who are transferred to an Arizona Department of Youth Treatment and Rehabilitation (juvenile corrections) facility are **not** considered dropouts.
  - Students who transfer to a home-taught program approved by the county superintendent are **not** considered dropouts.
  - Students enrolled in alternative education programs are **not** considered dropouts if the program is (1) administered by the school district or (2) approved by the district and is considered a full-time secondary educational program.
  - Students who do not return to school because they completed graduation requirements during the summer or at mid-year are **not** considered dropouts.
  - Students who enter early college admissions programs before graduating from high school are **not** considered dropouts, if they are enrolled fulltime in a program leading to a postsecondary degree.
  - Students who leave school at age 22 receive a completion credential such as a certificate of attendance and are **not** considered dropouts.
  - Students who leave school and return before the end of the school year are **not** considered dropouts.
  - Students who have moved out of the area and are not known to be in school **are** considered dropouts.
  - Students transferring to adult education programs in schools with courses of study not meeting standard graduation requirements (e.g., G.E.D. preparatory classes, vocational certificate programs, technical schools) **are** considered dropouts, regardless of whether they earn a G.E.D. certificate.
  - Students who leave school and take correspondence courses **are** considered dropouts until they have earned and transferred back to the school enough course

credits to satisfy graduation requirements.

The school record must indicate the withdrawal status of each student who leaves the school. Documentation of transfer to another school consists of

(1) request from another school for a transcript or student records, or
(2) information from a responsible adult that the student is enrolled elsewhere.

Withdrawal codes may change throughout the year as information becomes available. For example, a student whose status was unknown when he was withdrawn would have been assigned one withdrawal code, but if a request for student records was received later from another school, the withdrawal code should have been changed at that time to the code appropriate for a transfer to another school. The status reported on the Year End Enrollment report reflected current knowledge at the time the report was filed.

Definition of Enrollment

Enrollment was defined as **an unduplicated count of students enrolled at the end of the 1991-92 school year or at any time during the 1992-93 school year.** Enrollment is seen as a roster that changes continually, even during the summer, as students enroll, transfer to other schools or otherwise leave, or graduate. Schools are responsible for monitoring and reporting their enrollment from the end of the prior school year to the last day of the reported school year. Students who are promoted from feeder schools become the responsibility of the school at which they are expected to enroll. Any student who had the potential to be counted as a dropout should have been reported once in enrollment.

To fairly calculate dropout rates, the ADE uses an unduplicated count of enrollment at each level. For example, a student who attended High School A in the district had the potential to be counted as a dropout at that school and was counted as a student served at High School A, for purposes of calculating dropout rates. If the student transferred midyear to High School B in the same district, he had the potential to be counted as a dropout at that school as well, and was counted as a student served. However, at the **district** level, the student should only count as **one** student served in calculating the district's dropout rate. The means for providing an unduplicated student count at each level was built into the enrollment codes used statewide.

Definition of the Dropout Rate

Dropout rate was defined as **the ratio of dropouts to enrollment, expressed as a percentage.** The number of dropouts in any particular school, grade, or ethnic or gender group was compared to the total enrollment in the same subgroup. In this study, the dropout rates show the proportion of students who drop out during one year. A related study, the Graduation Rate Study, calculates a **four-year** dropout rate.

III. ANALYSIS

Profile

Year End Enrollment Reports were submitted for 497 schools and 29 special programs in 207 school districts which teach any of the grades seven through twelve or ungraded high school classes. Throughout this report, the reader should note whether the population in each analysis refers to one grade, the elementary grades (seven and eight combined), the high school grades (nine through twelve and ungraded secondary combined) or all grades (seven through ungraded secondary).

The enrollment count at each level represents an unduplicated count of every student enrolled for any length of time during the twelve-month reporting period. That is, a student who attended three schools during 1992-93 was counted in enrollment at each school of attendance, but only once at the district, county, and state levels. The total state enrollment in this study was 308,776. The distribution of ethnic and gender representation in the study is shown in the table below.

Table 1
Ethnic and Gender Proportion of Total Enrollment

White	60%
Black	4%
Hispanic	27%
American Indian	7%
Asian	2%
Male	52%
Female	48%

Dropout Rates by Grade

The median, mean, and range of dropout rates[2], the number of dropouts reported, and reports received for each grade are shown in the following table. The median, range, and number of reports refer to district summary reports; means and number of dropouts were state totals.

Table 2
Descriptive Measurements of Dropout Rates

	Median	Mean	Range	No. of Dropouts	No. of Reports
Grade Seven	0.7%	3.1%	0.0% to 20.5%	1,799	188
Grade Eight	1.1%	3.2%	0.0% to 22.6%	1,730	188
TOTAL ELEM.	1.1%	3.2%	0.0% to 17.1%	3,529	188
Grade Nine	8.9%	12.0%	0.0% to 36.1%	7,001	105
Grade Ten	9.8%	11.8%	0.0% to 34.7%	6,124	101
Grade Eleven	10.1%	12.2%	0.0% to 24.6%	5,303	102
Grade Twelve	8.2%	12.7%	0.0% to 32.9%	5,290	100
Ungraded Secondary	0.0%	35.0%	0.0% to 67.4%	630	28
TOTAL HIGH SCH.	9.2%	12.4%	0.0% to 30.3%	24,348	108
TOTAL 7 through 12[3]	3.7%	9.0%	0.0% to 29.8%	27,877	207

As shown, the **number** of dropouts decreases from the ninth to twelfth grade, but the **proportion** (mean rate) increases. Ungraded secondary ("US") students represent less than one percent of high school students and generally are in an ungraded program because of special needs, many of which are associated with higher rates of dropping out.

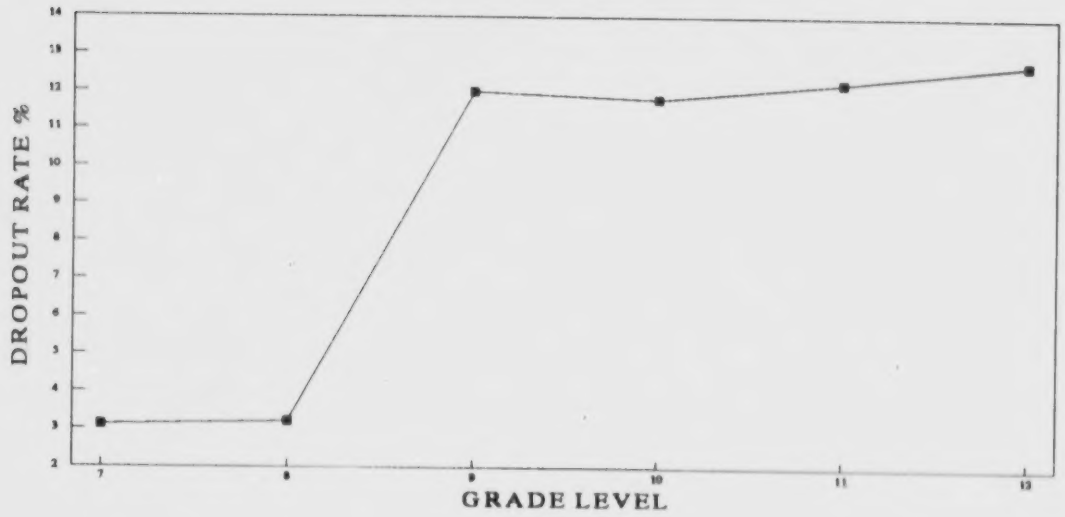
The mean dropout rates by grade are shown graphically in the following chart.

---

[2] The median is the midpoint of dropout rates when districts were rank ordered; half of the districts have rates which fall above, and half which fall below, the median. The mean, also known as the average, is the total number of dropouts divided by the total number of students enrolled. The range indicates the lowest and highest dropout rate.

[3] For districts with all grades seven through twelve (N=83), the median was 6.4%, the mean was 6.8%, the range was 0.0% to 22.6%, and the number of dropouts was 14,704.

Chart 1
Dropout Rates by Grade



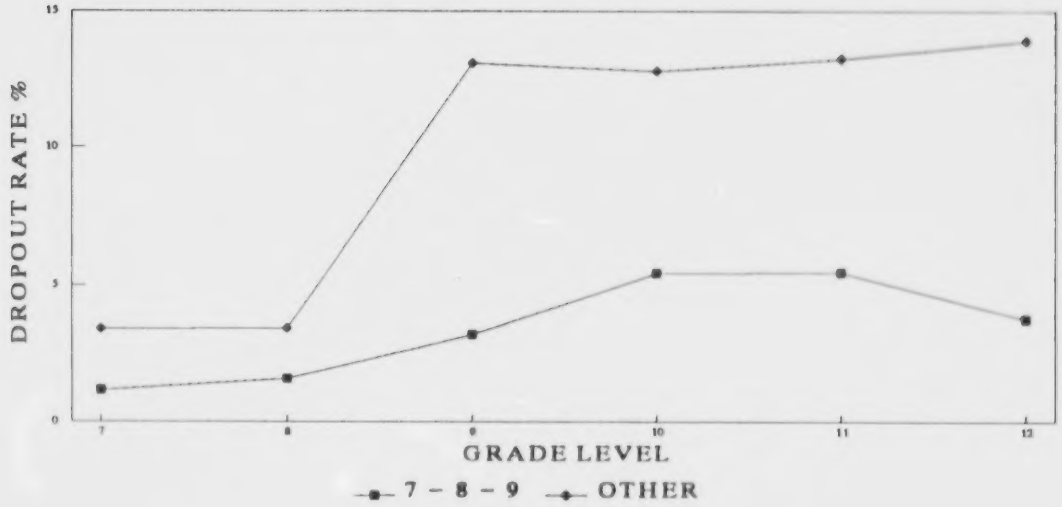
The large increase in dropout rates between the eighth and ninth grades (from 3.2% to 12.0%) has been documented in prior state studies and evidenced in national studies, as well. The data indicate that the transition from elementary to high school is a difficult period in students' lives, a: d in spite of mandatory attendance laws, many students are dropping out of school during the transition.

A comparison of dropout rates revealed that the increase in dropout rates between the eighth and ninth grade was not as pronounced in the two districts (Mesa and Chandler) that teach ninth grade classes in the junior high school ("7-8-9 schools"). The table and chart that follow compare the dropout rates for grades seven through eleven of the 7-8-9 schools with all other districts in the state. In this analysis, the **pattern** of the increase in rates is more significant than the actual rates because the 7-8-9 schools represent a limited number of students who are not representative of the ethnic proportions of the state. The generally higher rates for "All Others" probably reflect disparity in ethnic proportions and other characteristics of the population.

Table 3
Dropout Rates for Schools
with Different Grade Structures

Type of School	Grade 7	Grade 8	Grade 9	Grade 10	Grade 11
7-8-9 Schools	1.2%	1.6%	3.2%	5.4%	5.5%
All Others	3.4%	3.4%	13.1%	12.8%	13.2%

Chart 2
Dropout Rates by Type of School



Dropout Rates by Ethnicity and Gender

Dropout rates varied significantly among ethnic groups. The mean rates were lowest for Asian students (5.5%) and highest for American Indian students (13.3%) overall, but the patterns of dropping out varied by grade levels. In the elementary grades, Hispanic and American Indian rates were approximately the same at 5.3%, about twice as high as the White or Asian dropout rates. In the ninth and tenth grades, American Indian rates were the highest, but in the eleventh and twelfth grades, the rates were higher for both Black and Hispanic students than for American Indians. For ungraded secondary students, the dropout rate was highest for White students and lowest for Black students.

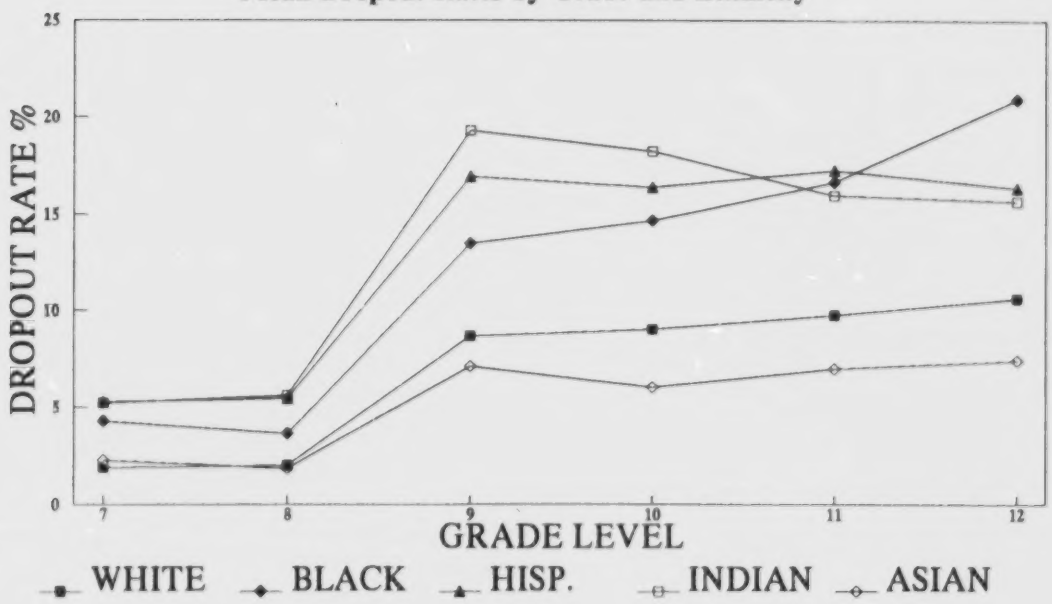
The pattern of dropout rates was different for American Indian students than for other ethnic groups. American Indian students were more likely to drop out of school in the ninth grade than at any other time. In the ninth grade, their dropout rate (19.3%) was more than twice as high as Asian (7.1%) or White (8.7%) students'. After ninth grade, the dropout rates for American Indians steadily declined. White and Black students, however, dropped out in increasing proportions as they got older; their dropout rates were highest in twelfth grade. Hispanic and Asian dropout rates fluctuated but remained fairly steady.

The dropout rates by ethnicity and grade are shown in the following table and chart.

Table 4
Mean Dropout Rates by Grade and Ethnicity

Grade	White	Black	Hispanic	Indian	Asian
7	1.9%	4.2%	5.3%	5.2%	2.2%
8	2.0%	3.6%	5.4%	5.6%	1.8%
Elem.	**1.9%**	**3.9%**	**5.3%**	**5.4%**	**2.0%**
9	8.7%	13.5%	16.9%	19.3%	7.1%
10	9.0%	14.6%	16.4%	18.2%	6.0%
11	9.8%	16.6%	17.2%	16.0%	7.0%
12	10.6%	20.9%	16.4%	15.7%	7.4%
US	44.5%	19.2%	30.6%	22.5%	26.9%
H.S.	**9.7%**	**16.2%**	**16.9%**	**17.6%**	**7.0%**
TOTAL	**6.8%**	**11.8%**	**12.7%**	**13.3%**	**5.5%**

Chart 3
Mean Dropout Rates by Grade and Ethnicity



Dropout rates were about the same for males and females on the elementary level, but the male dropout rate (13.4%) was considerably higher than the female rate (11.2%) at the high school level. Only in the ungraded high school programs was the female rate (54.8%) higher than male (26.2%). The mean dropout rates by grade and gender are shown in the following chart.

Chart 4
Mean Dropout Rates by Grade and Gender

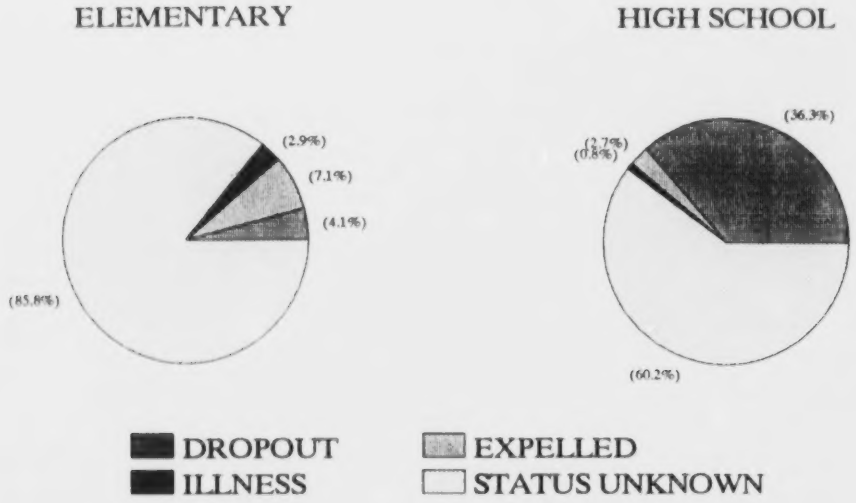
Types of Dropouts

In the past, dropout reporting did not distinguish students who deliberately dropped out from those who were expelled, those who were forced to leave school because of illness, and those whose status was unknown. Each of those situations is clearly different from another and each suggests a different course of action to reduce the dropout rate. It is particularly important to distinguish between known dropouts and those of unknown status.

The withdrawal codes used in 1992-93 gave some insight into a few of the conditions associated with dropping out. In the elementary grades, only 11% of the dropouts deliberately left school or were expelled. Another 3% left school because of a physical illness that could not be accommodated by a homebound instruction program. An overwhelming majority, 86% of the dropouts, were students whose status was unknown. It is generally believed that most of these students have moved and re-enrolled in other schools, without notifying the schools they left. This probably occurred more frequently on the elementary level than on the high school level because some schools (particularly out of state) accept elementary students without requesting prior records; high schools may be more diligent in requesting transcripts to verify credits earned toward graduation.

More than half of the high school dropouts (60%) are students whose status is unknown, but, as stated above, a smaller proportion of them are believed to be enrolled in other schools. Only 1% of high school dropouts left school because of illness, 3% were expelled, and the remaining 36% of the dropouts chose to leave school. The following chart indicates the proportion of elementary and high school dropouts attributed to each of the four components.

Chart 5
Type of Dropouts



The following table shows the proportions of dropouts attributed to each condition, by grade [4].

Table 5
Proportion of Dropouts by Type and Grade

	Dropped Out	Expelled	Status Unknown	Illness
Grade 7	2%	6%	89%	3%
Grade 8	6%	8%	83%	3%
Grade 9	30%	4%	65%	1%
Grade 10	37%	3%	59%	1%
Grade 11	41%	2%	57%	1%
Grade 12	41%	2%	57%	.5%
Ungraded Sec.	25%	.3%	74%	.5%

A school or district with a high proportion of students whose status is unknown might dramatically reduce its dropout rate by working to locate those students soon after they stop attending school, or in the case of summer dropouts, soon after the school year begins. Logically, this would have more impact on the dropout rates in the elementary grades, when it is more likely that those students are enrolled elsewhere. As districts reduce the proportion of status-unknown dropouts, the other dropout statistics become more meaningful. For example,

[4] Percentages may not total 100 because of rounding.

as districts take a stronger stance against the use of weapons and drugs on campus, the expulsion rate may rise. In future years, district administrators will be able to notice trends in the different components of their dropout rates and better understand the factors contributing to their overall dropout rate.

There were ethnic differences among the components of the dropout count. As shown in the following table, proportionately fewer of the White dropouts were students whose status was unknown; they were more likely than the ethnic minorities to drop out. White and Asian students were more likely than the other ethnic groups to have left because of illness. American Indian students were the least likely to have been expelled, but more than three-fourths were students whose status was unknown.

Table 6
Proportion of Dropouts by Type and Ethnicity

	White	Black	Hispanic	Indian	Asian
Dropped out	38%	31%	29%	21%	27%
Status unknown	58%	63%	66%	77%	67%
Expelled	2%	5%	4%	2%	4%
Illness	1%	1%	1%	1%	2%

School Year and Summer Dropouts

The data submitted by the schools indicated whether the dropouts left during the school year or during the summer. The following table shows that students were increasingly more likely to drop out of school during the school year than during the summer from seventh through the tenth grade. Dropouts from ungraded secondary programs nearly always leave during the school year.

Table 7
School Year and Summer Dropouts
as a Percentage of Total Dropouts by Grade

Grade	School Year	Summer
7	54%	46%
8	68%	32%
9	74%	26%
10	79%	21%
11	77%	23%
12	74%	26%
US	95%	5%

There were also differences in the timing of dropping out among ethnic groups. American Indian students were the most likely, and Asian students were the least likely, to have dropped out during the school year. The following table shows the proportion of dropouts who left during the school year (as opposed to summer dropouts) for each ethnic group and grade level.

Table 8
Proportion of Dropouts Who Left During the School Year by Ethnicity and Grade

	White	Black	Hispanic	Indian	Asian
Grade 7	42%	54%	59%	74%	17%
Grade 8	64%	81%	67%	86%	36%
Grade 9	70%	69%	76%	85%	54%
Grade 10	79%	75%	79%	85%	76%
Grade 11	81%	72%	73%	80%	74%
Grade 12	75%	74%	73%	79%	67%
Ungraded	96%	92%	94%	89%	100%

Dropout Rates by Type of School District

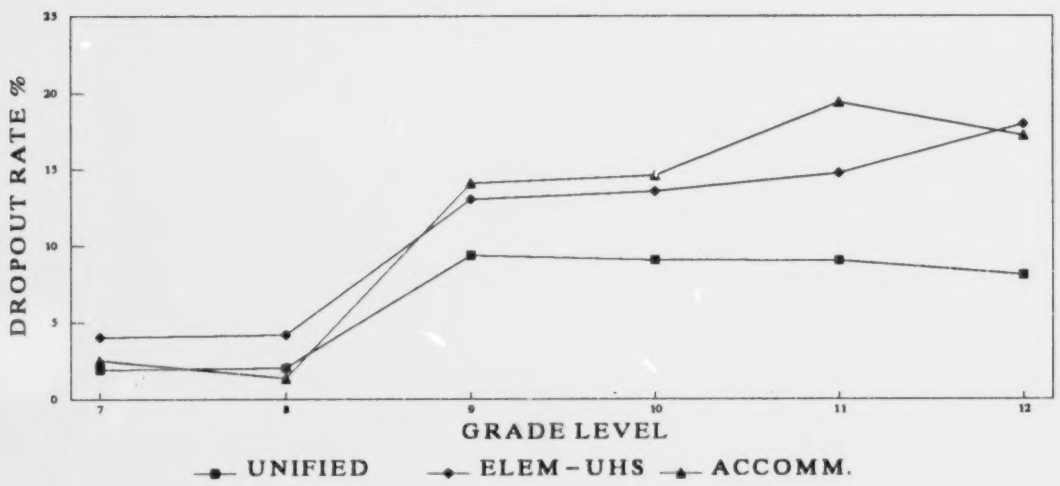
Districts are identified by the grades taught. Unified districts typically offer instruction in all grades, kindergarten through grade twelve. Elementary districts typically offer instruction from kindergarten through grade eight. Union high school districts offer instruction in grades nine through twelve. Accommodation districts and special programs serve students with needs that cannot be accommodated within a regular district.

In every grade, the mean dropout rates were noticeably lower for unified districts than for their counterparts, the elementary and union high school districts. The unified districts represented about 63% of the enrollment and 52% of the dropouts in this study. The pattern of dropping out differed, too. In unified districts, dropout rates decreased from ninth to twelfth grade, but in the union high school districts, dropout rates increased from ninth to twelfth grade. The ungraded secondary population in union high school or accommodation districts was too small to make meaningful comparisons with unified districts. The following table and chart compare rates by grade for the different types of districts.

Table 9
Mean Dropout Rates by Grade and Type of District

Grade	Unified	Elem./UHS	Accommod.
7	1.9%	4.0%	2.5%
8	2.0%	4.2%	1.3%
Total Elem.	2.0%	4.1%	1.9%
9	9.4%	13.0%	14.1%
10	9.1%	13.6%	14.6%
11	9.0%	14.7%	19.4%
12	8.1%	18.0%	17.2%
Ungraded	47.0%	6.7%	0.0%
Total High School	9.3%	14.6%	15.5%
7 - 12	6.7%	10.6%	11.1%

Chart 6
Mean Dropout Rates by Grade and Type of District



The unified districts had lower dropout rates partly because the ethnic representation of their students was different from the other districts. For example, 35% of the total enrollment in unified districts were minority students; 47% of the enrollment in elementary and high school districts were minority students, and 49% of enrollment in accommodation districts were minority students. The higher dropout rates associated with minority students would elevate the

non-unified districts' overall dropout rates, but even if the ethnic proportions were the same, the unified districts would show lower rates because their minority students drop out at a lower rate than minority students in non-unified districts. The following chart shows the dropout rates for each ethnic group by type of district.

Chart 7
Dropout Rates by Ethnicity and Type of District

Dropout Rates by District Size

In general, larger districts had higher dropout rates, as shown in the following table. Districts with fewer than 100 students had a dropout rate of only 1.6%, but almost all were elementary districts with only seventh and eighth grades to report. The largest districts, with more than 5,000 students, had a mean dropout rate of 8.4%. Logically, one might expect the larger districts to have a higher proportion of students whose status was unknown within their dropout count, but some of the larger districts have become quite efficient at locating students and reclassifying them as transfer students or known dropouts. In the eight largest districts (over 10,000 students), the high school dropout rates ranged from 4.2% (Mesa Unified District) to 22.9% (Phoenix Union High School District).

Table 10
Dropout Rates by Size of Enrollment

	< 100	100-499	500-999	1,000-4,999	5,000+
No. of Districts	57	51	30	53	16
Mean Rate	1.6%	5.0%	7.8%	7.3%	8.4%
% Status unknown	64%	44%	55%	70%	60%

Dropout Rates by School District

The districts' high school dropout rates are presented in rank order as Appendix A. Elementary-level dropout rates are ranked in Appendix B. A dropout report for each district is presented as Appendix C. Dropout reports by school are available from the ADE upon request. A dropout rate which was above the state average range indicated that one or more of the following conditions existed:

- The district had a higher-than-average proportion of dropouts,
- the district had problems in the recordkeeping or reporting systems, or
- the population was too small to use percentages meaningfully.

The districts vary widely in their socioeconomic and population characteristics and this was expected to affect their dropout rates. For example, a district with a high proportion of American Indian students is likely to have a higher dropout rate because of the higher dropout rates associated with that ethnic group. There are several accommodation schools and special programs which specifically serve students who are at higher risk for dropping out or have already dropped out of a regular high school program. Dropout rates are typically high in these schools because of their populations; every student retained is a success story. For comparative purposes, a reader should compare rates of districts with similar populations and socioeconomic conditions.

Dropout Rates by County

The districts' reports were totalled to calculate mean dropout rates by county. The county reports are presented along with the state total report in Appendix D. The mean rates are summarized in the following table.

Table 11
Mean Dropout Rates by County and Grade

County	Number of Districts	Students Enrolled	Total Elem.	Total 9 - 12	Total 7 - 12
Apache	10	7,076	4.1%	13.8%	10.4%
Cochise	21	9,757	2.6%	8.9%	6.6%
Coconino	6	9,360	0.9%	9.8%	6.8%
Gila	8	3,958	3.1%	14.3%	10.1%
Graham	7	2,708	1.5%	6.9%	5.0%
Greenlee	6	1,151	0.5%	4.7%	3.1%
La Paz	6	1,535	1.1%	18.3%	12.4%
Maricopa	57	169,611	3.3%	12.5%	9.2%
Mohave	13	8,406	2.6%	16.0%	11.0%
Navajo	11	8,164	1.6%	9.5%	6.6%
Pima	14	51,128	3.3%	12.6%	9.3%
Pinal	18	10,624	4.6%	16.7%	12.2%
Santa Cruz	5	3,804	2.3%	17.2%	11.8%
Yavapai	15	8,646	1.5%	10.0%	6.8%
Yuma	9	12,275	4.1%	10.6%	8.3%
ADYTR[5]	1	573	0.0%	0.0%	0.0%
Arizona	207	308,776	3.2%	12.4%	9.0%

The lowest rates were in Greenlee County, where enrollment was the lowest and all six school districts reported rates well below the state mean rates. The highest rates in the state were in Apache County, on both the elementary and high school level. Seventy-six percent of Apache County's enrollment were American Indian students.

[5] Arizona Department of Youth Treatment and Rehabilitation, the juvenile corrections facilities

Comparison of 1992-93 Dropout Rates to 1991-92

The definitions and methodologies used in the past three years' studies have been similar, but there were slight differences that affected the rates and comparability. See Appendix E, "Methods and Formulas for Calculating Dropout Rates," for a detailed explanation of changes. In this section, dropout rates were compared to those data collected for 1991-92 that pertain to the corresponding reporting period (twelve-month, unadjusted).

Compared to the 1991-92 reports, the dropout counts and rates were lower this year for **elementary** students, from 3.3% in 1991-92 to 3.2% in 1992-93. Seventy districts had lower dropout rates, 59 districts' dropout rates remained the same (within 0.1%), and 59 districts had higher dropout rates than in 1991-92. Sixty districts had no elementary dropouts this year.

Statewide, the **high school** dropout rates for 1992-93 (12.4%) were higher than 1991-92 (10.9%) by 1.5 percentage points. Higher rates were not universal, however. High school dropout rates declined or remained constant for 52 districts and rates were higher for 52 districts. The state's average dropout rate rose because the districts whose rates were up had a median increase of 2.5 percentage points and districts whose rates were down had a median decrease of 1.9 percentage points. One district accounted for 43% of the state's increase dropouts. Sixty-three of the 104 districts with high school grades had dropout rates lower than the state average for both years.

Table 12
Dropout Counts and Rates by Grade
1991-92 and 1992-93

	1991-92		1992-93	
	Number	Rate	Number	Rate
Grade 7	1,887	3.2%	1,799	3.1%
Grade 8	1,905	3.4%	1,730	3.2%
Total Elem.	3,792	3.3%	3,529	3.2%
Grade 9	6,082	10.3%	7,001	12.0%
Grade 10	5,438	10.5%	6,124	11.8%
Grade 11	4,793	10.6%	5,303	12.2%
Grade 12	5,376	12.3%	5,290	12.7%
Ungraded Sec.[6]	n.a.	n.a.	630	35.0%
Total H.S.	21,689	10.9%	24,348	12.4%
Grades 7-12	25,481	8.1%	27,877	9.0%

[6] In 1991-92, ungraded secondary students were assigned to the grade level most appropriate for their ages.

The dropout rates increased for all ethnic groups except for Asian students. There were also fewer American Indian dropouts this year, although the dropout rate increased slightly from 13.0% to 13.3%. The rates rose more for males than for females. The following table compares mean dropout rates for the two years.

Table 13
Dropout Counts and Rates by Ethnicity and Gender
1991-92 and 1992-93

	1991-92		1992-93	
	Number	Rate	Number	Rate
White	11,550	6.0%	12,804	6.8%
Black	1,412	10.6%	1,487	11.8%
Hispanic	9,280	11.4%	10,444	12.7%
American Indian	2,900	13.0%	2,848	13.3%
Asian	339	6.5%	294	5.5%
Male	13,910	8.6%	15,525	9.8%
Female	11,571	7.6%	12,352	8.3%

Changes in a district's dropout rate **should** reflect an actual change in the dropout condition of the district, because none of the definitions, data elements, or calculation changed this year. However, some districts' rates changed so much, it is reasonable to question whether the reporting was accurate. There **was** a change in the reporting methodology for the 1992-93 report, but it would not have influenced the dropout rates if dropout and enrollment data were properly reported both years. For the prior dropout studies, a person at the school or district compiled dropout and enrollment data manually from whatever sources were available, then filled in dropout report forms, and submitted them to the ADE. Data collection was time-consuming and cumbersome for many schools. To eliminate that reporting burden and improve data reliability, the ADE looked for a way to extract the necessary dropout data from other required reports. The ADE recognized that by redefining the enrollment and withdrawal codes which are used daily as part of the normal recordkeeping process, the data needed for the dropout study could be extracted from the existing Year End Enrollment Report. The codes were changed at the beginning of the 1992-93 school year and all dropout data used in this report were collected from the districts' Year End Enrollment Reports. In general, the 1992-93 data should be more reliable because the source of the data was standardized across districts and the Year End Enrollment reports are more easily verified by the ADE than the data collected in the past on dropout reporting forms. Only the data **source** (not the dropout definitions, data elements, and calculation) has changed. See Appendix E, particularly the section "More Reliable Reporting" on p. 270, for a more complete discussion of the methodological changes.

Summary

Increasingly, dropout rates have been used as a measure of a district's performance. The heightened attentiveness to the dropout condition in Arizona's schools has prompted some districts to improve their procedures to locate more missing students, encourage dropouts to remain in school, retrieve dropouts through alternative programs, and report data more accurately. However, there are still problems at some districts, evidenced by high dropout rates or large swings in their dropout rates from year to year.

The measured increase in the state's dropout rate from 1991-92 to 1992-93 was not uniformly spread across the districts. A majority of the districts have been reporting accurately and their dropout prevention efforts have produced a steady decline in the dropout rate. But in many cases there have been reporting errors. In some cases, the desire to improve dropout rates may have caused an underreporting of dropout counts to the ADE. The errors in **measurement** must be corrected before administrators can use the data to plan dropout prevention programs which address the particular problems and conditions of the district.

Although there have been subtle changes in the methodology over the past three years, each change has represented an improvement in the accuracy and validity of the data. With no changes anticipated to next year's study, the 1992-93 data will serve as a baseline for districts which have had reporting problems, and as one of several points in a dropout rate trendline for districts which have attained a satisfactory level of reporting accuracy.

RANKING OF DISTRICTS BY HIGH SCHOOL DROPOUT RATE

In the following list, districts are listed in order of their 1992-93 high school dropout rate (grades nine through twelve and ungraded secondary, unless otherwise indicated). When the dropout rates were the same for more than one district, they were listed in alphabetic order with the same ranking. When a district has more than one high school, the high schools and their rates were listed below the district name. The sum of the high schools' enrollment may be greater than the district's enrollment, because district enrollment is an unduplicated student count. The district's 1991-92 dropout rate, calculated for a comparable period of time, was shown for comparison. An "n.a." in the rate column indicates data were not available for 1991-92, perhaps because the school or program was not operating or the grade was not taught that year. The reader should be aware that, in districts with a very small high school population, each dropout has a strong effect on the dropout rate percentage.

Rank	School District	Total 9-12 Enrollment	1991-92 Dropout Rate		1992-93 Dropout Rate	
			School	Dist.	School	Dist.

---

[13] Howenstine provides special education.

[14] Project MORE provides special accommodations for students who have already dropped out.

[15] Project PASS is an alternative study program for dropouts. Because there are no specific requirements for attendance and the program does not have requirements which lead to graduation, this program has not been approved for state funding and these students are still considered dropouts.

[16] Project RISE is an alternative program for adjudicated students.

[17] The Senior High Accommodation Program provides alternative education for students who have already dropped out.

[18] The Teenage Parent Program serves pregnant and parenting students through Project MORE.

[19] Homebound-Teleteaching educates chronically ill students through television programs.

[22] Bostrom Alternative Center provides "at-risk" students a non-traditional environment for learning basic skills, career education, and other courses that meet graduation requirements.

[23] Cyesis Center provides alternative educational opportunity for pregnant or parenting students.

[24] Desiderata provides educational experiences for handicapped students who require a structured psycho-educational environment.

[25] Homebound instruction is available for students who will be out of school for at least 90 days.

[26] Metro Tech offers students occupational and vocational courses.

RANKING OF DISTRICTS BY ELEMENTARY DROPOUT RATE

In the following list, districts are listed in order of their dropout rate for the elementary grades (grades seven and eight combined, unless otherwise indicated). When the dropout rates were the same for more than one district, they were listed in alphabetic order and with the same ranking. The district's 1991-92 dropout rate, calculated for a comparable period of time, was shown for comparison. The reader should be aware that, in districts with a very small population, each dropout has a strong effect on the dropout rate percentage.

[27] Murphy Elementary's 1991-92 dropout rates were inconsistent with the Year End Enrollment reports filed for that year.

DROPOUT REPORTS BY SCHOOL DISTRICT

How to Read the Reports

The district reports which follow this introduction are in alphabetic order. The district's identifying number is in the upper left corner. This six-digit CTD number identifies the county (first two digits), type (third and fourth digits) and district. Type 01 districts are accommodation schools and special programs. Type 02 districts are unified districts, types 03 and 04 are elementary districts and type 05 districts are union high school districts.

There is a dropout count by ethnicity and by gender for each grade (seven through twelve) taught by the district. The rates were calculated as a percentage of the total number of students served in that grade, ethnic, or gender group. The seventh and eighth grades combined equal the elementary total, the high school grades combined equal the high school total, and all grades taught by the district combined equal the district total. The enrollment counts are unduplicated at each level; that is, a student who transferred from one school to another within the district has only been counted once at the district level. Reports are available for each school within the district, by requesting them from the ADE.

The dropout analysis at the bottom of each report shows, for elementary and high school separately, the number of dropouts attributed to each component of the dropout count (known dropouts, expelled, status unknown, and illness) and the percentage of total dropouts that number represents. The number and proportion of dropouts attributed to the school year and summer months are shown next. In many cases, a high proportion of summer dropouts was associated with a high proportion of students whose status was unknown.

The last two lines of the report compare the number of dropouts and the dropout rates for 1992-93 and 1991-92. The data elements and the calculation were the same both years, so the rates should be directly comparable. However, in 1991-92, the data were reported on Dropout Report forms and, in 1992-93, the data used for this report were extracted from the Year End Enrollment report. See Appendix E for a complete discussion of the differences in reporting methodology and how the changes may have affected the dropout rates.

A large change in the dropout rates from one year to the next could indicate (1) actual changes in the dropout condition of the district, (2) a problem with data collection and reporting for one of the years, (3) the statistical anomalies of percentages when small populations are involved, or (4) some other peculiar factor. In terms of dropout rate changes, the following districts were outside the normal range of change and may have special circumstances which deserve mention. **Please notice that the following rates and counts pertain to the high school grades only.**

Apache Junction Unified District - The district's dropout count went from 121 in 1991-92 to 188 in 1992-93, raising the rate from 9.3% (below the state average) to 13.7%. Eleventh grade dropout rates were higher, and twelfth grade rates lower, than the state average both years. The district's proportion of status-unknown dropouts is somewhat lower than the norm.

Ash Fork Unified District - Ash Fork is an example of a district whose rates dropped sharply with only four fewer dropouts, because its population is so small. The enrollment remained the same -- around 60 students -- but the rate dropped from 16.4% in 1991-92 to 9.7% in 1992-93 because the dropout count went from 10 to 6.

Bicentennial Union High School District - This district had the largest point increase in dropout rates of any in the state, from 17.4% in 1991-92 to 30.3% in 1992-93. The dropout count went from 38 last year to 74 this year. Only 24% of the dropouts were students whose status was unknown, but the high proportion of summer dropouts and the very high dropout rates for ninth graders suggest that the district is losing students before they even enter ninth grade.

Blue Ridge Unified District - This district had the fourth largest relative increase in dropout rates (up 156% from last year's rates), going from a 2.5% dropout rate in 1991-92 to a 6.4% rate in 1992-93. Both years' rates are well below the state norm. The dropout count went from 15 to 42 in one year.

Bowie Unified District - The reported dropout rate fell from 12.7% in 1991-92 to 4.9% in 1992-93. Having a small population may account for some of the drastic change: the dropout count fell from seven to two, and small changes in the count create large changes in the percentages, when the total enrollment is less than 50.

Chinle Unified District - The reported dropout rate fell 9.5 percentage points, from 28.0% in 1991-92 to 18.5% in 1992-93. Total enrollment did not vary drastically, but the dropout count did. In 1991-92, the district reported 453 dropouts; for 1992-93, 293 dropouts were reported. It is likely that the 1991-92 report had errors: last year its reported rate was ten points higher than the norm for a predominantly American Indian population. This year's reported rate is much closer to the norm.

Colorado River Union High District - The district's reported dropout rate fell nearly six percentage points, from 24.8% in 1991-92 to 19.0% in 1992-93. The district's rate improved because enrollment increased more than 300 students without a corresponding increase in dropouts. In fact, the dropout count fell from 410 to 374. Last year, dropout rates were two to three times higher than the state norms for each ethnic group; this year the rates are noticeably higher than state norms, but not to the same extent. The district's proportion of status-unknown dropouts is much higher than the state average, suggesting that the rate could be improved with more effort to locate students who leave unexpectedly during the school year.

Deer Valley Unified District - The district's dropout count increased from 453 in 1991-92 to 745 in 1992-93, raising its dropout rate from 9.7% to 14.3%. Reporting errors are suspected

in one of the two years. Last year, the district's rates were not noticeably different from the norm, except that its ninth grade dropout rate was half the state average. This year, every grade's dropout rates were higher than the state norm. The twelfth grade dropout rate was four percentage points higher than the state average.

Fredonia-Moccasin Unified District - This district had the third largest point increase in dropout rates in the state, from 0.8% in 1991-92 to 8.6% in 1992-93, and the greatest relative increase in rates (up 975% from last year). Since the dropout count went from one last year to 13 this year in roughly the same size population, reporting errors are suspected in one of the two years. This year's rate is much closer to the state's norm.

Gila Bend Unified District - The district's reported dropout rate fell nearly six points, from 19.7% in 1991-92 to 14.0% in 1992-93 with an improvement in the dropout count of only nine students. Last year, its dropout rate for White and Indian students was twice the state's norm; this year the rates are closer to normal, but the Indian rates were still higher than the norm.

Globe Unified District - The district's dropout count doubled, from 41 dropouts in 1991-92 to 83 in 1992-93. Reporting errors in the 1991-92 data are suspected, since this year's rates are closer to the norm. Much of the increase was in the Hispanic rates, which jumped from 2.3% in 1991-92 to 11.2%. More than 80% of the district's reported dropouts were in the status-unknown category, suggesting that the dropout rate could be improved with more effort to locate missing students.

Hayden-Winkelman Unified District - Hayden's dropout count nearly tripled this year, from six in 1991-92 to 17 in 1992-93, increasing its dropout rate from 3.8% to 9.4%. This was the fifth largest relative increase in dropout rates (up 147%) for a one year period. Both years' rates were below the state average, but this year's was much closer to the norm, and the data show that most of the dropouts were students who chose to leave school, not students whose status was unknown.

Holbrook Unified District - The reported dropout rate fell 9.0 percentage points, from 15.7% in 1991-92 to 6.7% in 1992-93. Total enrollment was down by 101 students, but the dropout count was down by 85, from 136 reported in 1991-92 to 51 reported in 1992-93. Last year's reported rates were closer to the norm than this year's, but this year's status-unknown portion of its dropout count is below the state average. If the district expended more effort this year in locating missing students, the effort paid off by decreasing the dropout rate.

Mammoth-San Manuel Unified District - The reported dropout rate fell 12.6 percentage points, from 21.5% in 1991-92 to 8.9% in 1992-93. Even though the total number of students served fell from 730 to 662, the rate dropped sharply. Last year, 157 students were reported to have dropped out; this year, only 59 were reported. Reporting errors are suspected in one of the two years. Last year, rates for White and Hispanic students were well above the state norm. This year, the district's dropout rate for White students is about average, but the dropout rate for Hispanic students is about half the state average.

Marana Unified District - This district had a large relative increase in dropout rates (up 56%, from 3.9% in 1991-92 to 6.1% in 1992-93). The dropout count went from 95 to 170, and the number of students served increased by 356. Both year's rates are well below the state average, but this year's rates are closer to the state's norm.

Maricopa County Regional Schools - The reported dropout rate fell 16 points in 1992-93. Formerly known as Horse Mesa Accommodation District, this district includes three accommodation schools (Williams AFB, Estrella Mountain, and East Valley), four hospitalized/homebound programs, three detention centers, and a school for homeless children. In 1991-92, the district only reported for the three accommodation schools and one hospitalized/homebound program. Because the East Valley Accommodation School serves students who had dropped out or were expelled from other schools, the district's dropout rate was high: 31.6% of its total reported population of 738 students. In 1992-93, the district submitted Year End Enrollment Reports for all of its programs and enrollment more than tripled, to 2,463 students served. The dropout rate fell to 15.6%. If the district had reported all programs in 1991-92, its dropout rate would probably have been much lower.

Mohave Union High School District - Mohave Union's dropout count increased from 147 in 1991-92 to 282 in 1992-93. That, combined with a decrease in the number of students served, doubled the district's dropout rates from 7.1% to 14.2%. Reporting errors are suspected in one of the two years. The ninth grade rates are particularly high and the proportion of status-unknown dropouts was higher than the state norm, suggesting that the dropout rate could be lowered by increased efforts toward locating missing students, particularly those entering ninth grade.

Nogales Unified District - The district's dropout count increased from 276 in 1991-92 to 414 in 1992-93, producing an increase in the dropout rate from 12.8% to 17.0%. Reporting errors are suspected in one of the two years. The population is predominantly Hispanic, and the Hispanic rates are about the same as the state average, but the White dropout rate is high. Tenth and eleventh grade rates are furthest from the norm. The district's proportions of summer dropouts and status-unknown are both high, suggesting that the rate could be decreased by continued efforts to locate missing students.

Paradise Valley Unified District - Paradise Valley had the third largest increase in dropout count. The number of dropouts increased from 718 in 1991-92 to 1,005 in 1992-93, an increase of 287, compared to an increase in enrollment of 490. The dropout rate increased from 8.4% to 11.2%.

Phoenix Union High School District - The district's reported dropout count increased by 1,142, from 4,850 in 1991-92 to 5,992 in 1992-93. Enrollment increased by 300 students. The dropout rate rose 4.3 points, from 19.6% to 23.9%. The increased number of PUHSD dropouts accounts for 43% of the state's increase in high school dropouts. Reporting errors are suspected in one of the two years. This year, the eleventh and twelfth grade dropout rates are twice the

state average, and the White rate (21.8%) is more than twice the norm (9.7%). The district's proportions of summer dropouts and status-unknown dropouts are higher than normal, suggesting that better monitoring of incoming eighth graders and fall no-shows could decrease the dropout rate.

Ray Unified District - This district had a large relative increase in dropout rates (up 105% in one year), with a dropout rate that went from 3.8% in 1991-92 to 7.8% in 1992-93. The dropout count more than doubled, increasing from 14 to 33. This year's rate is still below the state's average and very little of the district's dropout count was attributed to students whose status was unknown.

Red Mesa Unified District - The reported dropout rate fell from 19.9% in 1991-92 to 12.3% in 1992-93. The enrollment was the same both years, but the dropout count fell from 73 to 45. Reporting errors are suspected in one of the two years. Last year, the dropout rate was five points higher than the norm for an American Indian population; this year its rate was five points lower than the norm on the high school level.

Santa Cruz Valley Union High School District - The district's dropout count went from 90 in 1991-92 to 122 in 1992-93, an increase of 4.2 points in the dropout rate. The district is much higher than the state norm in ninth and tenth grade, in particular. Its proportions of status-unknown dropouts is lower than normal.

Sierra Vista Unified District - The reported dropout rate fell from 14.0% in 1991-92 to 7.8% in 1992-93. Total enrollment was roughly the same, but the dropout count fell from 380 to 214. Reporting errors are suspected in one of the two years, probably 1991-92. Last year, its dropout rate for White students was about five points higher than the norm and the rate for Asian students was nearly 10 points above the norm. This year, its reported rates were three to nine points lower than the norm in every ethnic group except Asians, which was at the norm. However, the district's proportion of status-unknown dropouts was lower than the state average, suggesting successful efforts to locate missing students.

Superior Unified District - This district had the fourth largest increase in dropout rates in the state in points (7.6 percentage points) and the third largest relative increase (up 185%). The rates went from 4.1% in 1991-92 to 11.7% in 1992-93. Reporting errors are suspected in last year's data, since this year's rate is much closer to (but still lower than) the state's norm. Only 15% of the reported dropouts were students whose status was unknown, suggesting successful efforts to locate missing students.

Tanque Verde Unified District - This district had the second largest point increase in dropout rates in the state, from 0% in 1991-92, to 11.1% in 1992-93. (Its relative increase cannot be measured because the 1991-92 rate was zero.) The district only teaches ninth grade on the high school level, but this year's ninth grade dropout rate is close to the state's norm for ninth graders, suggesting reporting errors in last year's report. There is an anomaly in this year's report, too: 70% of the dropouts were reported to have left because of illness. The state's

average was 1% of the dropouts. Last year, the district reported no dropouts from a population of 136; this year there were 20 dropouts from a population of 180.

Thatcher Unified District - This district had the sixth largest relative increase in dropout rates in a one-year period (up 128%). There were 11 reported dropouts in 1991-92 and 27 in 1992-93. The dropout rate, at 5.7%, is still well below the state norm, but there may have been reporting errors in last year's data.

Valley Union High School District - The dropout count went from four in 1991-92 to 15 in 1992-93, an increase in rates from 1.9% to 6.8%. This was the second largest relative increase in the state (up 258%). Reporting errors are suspected in the 1991-92 data, since this year's rates are much closer to the state norm. Most of the district's dropouts were known to have left school deliberately, rather than being status-unknown dropouts.

Whiteriver Unified District - The district's dropout rate went from 12.0% in 1991-92 to 18.3% in 1992-93, with 38 more dropouts. The predominantly Indian population had higher rates than the state's norm for Indian students in ninth and tenth grades; last year's Indian rates were lower than the state average for all grades.

Window Rock Unified District - Window Rock had a fairly large relative increase in dropout rates (up 49%), with a dropout count of 7[illegible] in 1991-92 to 122 in 1992-93. This predominantly Indian district's dropout rates are much closer to the state norm for Indian students this year than it was last year, but its proportion of dropouts whose status was unknown was very high: 92% of the dropout count. More effort to locate missing students could lower the dropout rate.

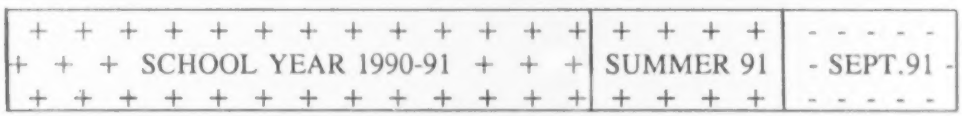
METHODS AND FORMULAS FOR CALCULATING DROPOUT RATES

People discuss *"the* dropout rate" as if there were only one way to define and calculate it. Unfortunately, there has not been a consensus of opinion nor a standard definition and calculation of dropout rates which would make it possible to compare dropout rates nationally. In 1988, the U.S. Department of Education (USDOE) adopted a definition of a dropout and conducted field tests, in preparation for requesting national dropout data that conformed in definition and methodology.

Methodology for the 1989-90 Dropout Rate Study

In 1990, the ADE began collecting dropout data, applying the definition and reporting calendar of the USDOE pilot study. The USDOE defined a dropout as "an individual who (1) was enrolled in school at some time during the previous school year, (2) was not enrolled at the beginning of the current school year, (3) has not graduated from high school or completed a state- or district-approved educational program, and (4) does not meet any of the following exclusionary conditions: (a) transfer to another public school district, private school, or state- or district-approved education program; (b) temporary absence due to suspension or school-approved illness; or (c) death." The reporting period, by definition, covered the school year, the following summer, and the first month of the succeeding school year, as shown in the diagram below.



Summer dropouts were reported with the grades they had just finished. September 1991 was a grace period, during which time school year dropouts could return to school and not be counted in the annual dropout count.

To calculate dropout rates, the USDOE suggested using the October 1 enrollment count as the denominator, as shown below.

$$\frac{\text{12-month dropout count - dropouts retrieved in September 1991}}{\text{Oct. 1, 1990 enrollment}}$$

However, because Arizona's population was so mobile, there were many students served, and also many dropouts, who were not in enrollment on October 1. Understating the number of students served (each of whom had the potential to be counted as a dropout) artificially inflated

the dropout rate, to the point that it was possible to calculate a dropout rate higher than 100%. The ADE included all students served in the denominator, to calculate a more accurate rate for the state's 1990-91 dropout report:

$$\frac{\text{12-month dropout count}}{\text{total number of students served}}$$

Changes in the USDOE Methodology

In June 1991, the USDOE requested all states to collect and report dropout data for 1991-92, so that a national dropout rate could be calculated. However, rather than use the methodology established in the pilot project, the USDOE decided to change the reporting calendar and the formula for calculating dropout rates. Summer dropouts were to be counted in the grade and school year for which they failed to appear. In other words, students who completed the eighth grade and dropped out during the summer were to be counted as ninth grade dropouts because they had completed their obligation to eighth grade. The 1991-92 dropout count represented dropouts from the summer of 1991 and the 1991-92 school year, less those who returned to school before October 1, 1992, as shown in the diagram below.

+ + + + + +	+ + + + + + + + + +		- - - - - -
+ SUMMER 91 +	+ SCHOOL YEAR 1991-92 + +	SUMMER 92	- SEPT. 92 -
+ + + + + +	+ + + + + + + + + +		- - - - - -

The change in the reporting calendar met with mixed reactions at the state and district levels. Most administrators agreed that it was more valid to count a summer dropout in the grade for which he was expected to enroll, rather than the grade he had completed. However, the calendar change highlighted the questionable practice of eliminating from the count those dropouts who returned to school in the succeeding school year. The new reporting calendar spanned sixteen months, begging the question of an **annual** dropout count and rate. The ADE contended that, by eliminating the September "retrievals" from the count, the annual dropout counts were understated and that important information about the extent and nature of dropping out was lost. Also, the new reporting calendar required schools to use student records from the end of the prior school year, the entire school year, and the beginning of the following school year to complete their dropout report. Districts complained that the reporting was unduly complex and burdensome.

The USDOE's proposed formula for calculating dropout rates was even more controversial. The denominator in its formula would average two years' October 1 enrollment counts and add back the dropouts, as shown below.

$$\frac{\text{12-month dropout count - dropouts retrieved in September 1992}}{\text{((Oct. 1, 1991 + Oct. 1, 1992)/2) + dropout count}}$$

Statistically, the proposed formula had many serious flaws that reduced its credibility and validity, particularly for states with high mobility and seasonal fluctuations in enrollment. Even at the district level, the formula could not be used for the last grade taught, because a second October enrollment count did not exist. The formula was particularly inappropriate for analyzing small subsets of the populations (such as the Indian females in the seventh grade of a particular school).

Since that type of analysis is critically important on the local level for planning dropout prevention programs, the ADE initiated discussion with the USDOE in January 1993 through the National Center for Education Statistics Forum. The Forum established a committee of ten states to make recommendations to the USDOE of other dropout rate formulas that use currently available data elements. At the present time, the USDOE has not responded to the committee's recommendations. It is unclear whether the USDOE will report the 1991-92 data collected from schools, because of discrepancies among the states' methodologies and reporting calendars.

Consideration of a Different Formula and Calendar for State Use

Most states have chosen not to use the USDOE formula for local and state analysis and have selected one of the more valid formulas for calculating dropout rates for their state reports. The ADE initiated discussions with representatives from approximately 25 Arizona school districts to discuss appropriate formulas for calculating dropout rates on the school, district, and state level. As a result of those meetings, the ADE decided to collect dropout data for the 1991-92 report two ways. Dropout counts were reported at the end of the school year (June 1992) to provide a true annual count of dropouts. In October, districts were asked to amend their dropout reports, to account for those dropouts who had returned to school in September, for the USDOE report. The differences in the original and adjusted rates were documented in the 1991-92 report: about 14% of the dropouts had returned [28]. Obviously, the true extent of dropping out was being obscured by the USDOE methodology. The ADE decided to discontinue adjusting the annual dropout count for those who returned in the subsequent school year. The reporting calendar was a consecutive twelve-month period: the school year and preceding summer, as shown in the diagram below.

SUMMER 92	SCHOOL YEAR 1992-93

[28] Not all schools filed amended reports. Those that did accounted for 14% of the original count of dropouts, but if all schools had filed amendments, the proportion of dropouts that returned to school would probably have been closer to 25%. Last year's report, the 1991-92 Dropout Rate Study, presented the **adjusted** counts and rates, since those were more comparable to the 1990-91 methodology. This year's report reflects the new methodology and, for comparative purposes, the 1991-92 dropout counts and rates refer to the **unadjusted** counts and rates.

More Reliable Reporting

The ADE also sought ways to make the dropout data reporting more reliable and less burdensome to districts. Since the beginning of the Dropout Rate Study, school or district personnel had collected dropout and enrollment data from several sources and submitted the totals to the ADE on dropout report forms. As would be expected, the data sources varied widely from one district to another. Some records (and some personnel) were more reliable than others. In any case, the reporting process was time-consuming and cumbersome.

Part of the reason the report was so time-consuming was that the enrollment and withdrawal codes schools were using for student attendance accounting systems were not defined in such a way that they could be used for the dropout report. For example, the withdrawal codes used for students transferring to other educational programs were not specific enough to determine whether those students should be counted as dropouts. By redefining the enrollment and withdrawal codes to align with definitions used in the dropout study, the data elements required for the Dropout Rate Study could be "built into" the normal enrollment and withdrawal procedures. These codes, which are recorded at the school, at the time of the enrollment or withdrawal, by attendance personnel closest to the students, are summarized at year end on the school's Year End Enrollment Report. The ADE could extract all the data elements required for the dropout study from that report, eliminating the need for a separate dropout report.

The ADE redefined the enrollment and withdrawal codes and instituted the use of summer withdrawal codes, effective with the 1992-93 school year. The new enrollment codes allowed for unduplicated student counts at each level (grade, school, district, and state). The number of withdrawal codes was reduced and the codes were clearly aligned with definitions used in the dropout study. For example, the different components of the dropout count (dropout, expulsion, chronic illness, and status unknown) were identified as separate withdrawal codes. Summer codes, assigned to students who were enrolled at the end of the prior school year but had not returned for the school year being reported, were added.

If the 1991-92 dropout reports were prepared correctly by the district personnel, any change in the dropout rates should have reflected actual changes in the dropout condition of the school, because none of the definitions, data elements, or formula changed. However, some districts' dropout rates changed so much from 1991-92 to 1992-93, it is reasonable to question whether the reporting was accurate. The 1992-93 data collection is believed to be the more accurate because the Year End Enrollment Report was edited by a number of mathematical and feasibility checks. The reader should look at both years' dropout counts and rates for the districts of interest and determine if the changes seem reasonable.

Other Factors Affecting Validity

- Within each school district, the size of the population of an ethnic/gender group (e.g., Asian males in seventh grade) may be very small, and each dropout has a strong effect

on the percentage. The reader should be aware that dropout rates for very small populations may not be meaningful.

- Enrollment and withdrawal codes may be recorded by several employees of each of the 207 districts reporting. Some employees are more conscientious in their work; others are less well trained or accurate and may have unknowingly misrepresented their districts' dropout conditions.

- Some districts aggressively investigate the status of fall no-shows; others make no effort to locate missing students. Districts that are less conscientious about monitoring students' status are potentially reporting an inflated dropout count.

- A student's first enrollment code of the year was used in aggregate totals, for purposes of calculating dropout rates. If he transferred to another **grade**, the enrollment code assigned at the new grade was not used in school or district aggregate totals. In three isolated cases, a student who had changed grades dropped out and there was no other student enrolled of that ethnicity and gender, so the dropout count was greater than the enrollment count for that cell on the school and district report.

- In some cases, enrollment was overstated at the district level. In 1992-93, schools used the S1 code to indicate summer transfers to another school. In districts with two or more schools of the same level (e.g., two high schools), a student may have been counted in enrollment at the high school he was expected to attend and in the high school he actually attended, if he transferred over the summer. Enrollment at the school level would be unduplicated, but district enrollment would be overstated by one. Enrollment at the county and state levels would not be overstated because summer transfers were not included in those totals. The problem has been corrected for 1993-94: schools have been instructed not to assign any summer code if a student transferred to another school within the district.

- County enrollment is understated by the number of students who transferred over the summer to schools outside the county, and state enrollment is understated by the number of students who transferred over the summer to schools outside the state because those data were not collected separately from other summer transfers. All summer transfers were eliminated from county and state totals to avoid double-counting them in enrollment.

Although it is possible to eliminate some error by using more detailed enrollment and withdrawal codes, the gain in accuracy does not warrant the additional cost and reporting burden. The validity concerns named in this section were not believed to be serious problems affecting the state's dropout rates.

DROPOUT DATA
1991-92 AND 1992-93

The dropout counts and rates of each district are presented in alphabetic order. Please notice that the data are for the **high school population only**. Asterisks in a field indicate meaningless calculations, such as division by zero. The columns on each page are identified below.

CTD	County-Type-District Identifying Number
